

Thinkitive Interview Questions:-

First Round Questions:-(L1)

- 1) Explain OOP concept
- 2) What is constructor
- 3) What is object
- 4) What is static block
- 5) What is abstraction
- 6) What is exception handling
- 7) List some of Runtime Exception
- 8) What is the difference between controller and REST controller
- 9) What is component annotation
- 10) What is joins
- 11) What is the difference between where vs having
- 12) Group by clauses
- 13) Query to find duplicate email from application
- 14) Introduction about yourself
- 15) Can we create object of abstract class
- 16) Why we use functional interface
- 17) Why we use linked list
- 18) Explain method overloading
- 19) What is the difference between interface and abstract class
- 20) Explain method overriding
- 21) Project related Questions
- 22) Which programming language are you most comfortable with ?
- 23) Diff Bt var ,let , const , Hoisting in javascript?
- 24) Promises in js
- 25) Write a program to check whether a number is prime
- 26) What is IOC
- 27) Explain DI
- 28) What is spring MVC
- 29) What is collection
- 30) Set internal implementation
- 31) Spring core concept
- 32) Advantages of spring boot
- 33) Annotations which are used in spring boot
- 34) How to Build REST API and how to test REST API
- 35) What is class and object
- 36) Explain constructor overloading
- 37) Is java fully object oriented programming language
- 38) What problem does interface solve
- 39) Explain JVM Architecture
- 40) Explain super keyword

- 41)what is Linear data structure
- 42)constructor chaining example
- 43)

Second Round Questions:-(L2)

1. Difference between jdk, jre and jvm
2. Explain hash map
3. Explain hash table
4. Explain actuator
5. Springboot annotation
6. Write a query in springboot application using @query annotation
7. What is CORS
8. What u do when server is not working
9. @scope annotation
10. What is the default scope of bean class
11. How to connect springboot to java application
12. What is indexing in sql
13. Internal working of hashmap
14. What is hash collision
15. Leet code two sum using optimal solution and explain time and space complexity
16. Find duplicate in array and explain time and space complexity
17. Find 2nd largest salary in employee table
18. Find largest element in array
19. Explain project Structure
20. Explain Bean Life Cycle
21. Explain singleton, prototype, session and request scope of bean class
22. Race condition
23. different between string, stringBuffer and String Builder
24. Real world example of each oops pillar

25. pattern code

```
1-2-3  
4-5-6  
7-8-9
```

Here is a simple Java program:

```
</> Java  
  
public class NumberPattern {  
    public static void main(String[] args) {  
  
        int num = 1;  
  
        for (int i = 1; i <= 3; i++) {  
            for (int j = 1; j <= 3; j++) {  
                System.out.print(num);  
  
                if (j < 3) {  
                    System.out.print("-");  
                }  
  
                num++;  
            }  
            System.out.println();  
        }  
    }  
}
```

Output

```
1-2-3  
4-5-6  
7-8-9
```

26.
